

1. You are the network administrator for Testking.com. The network consists of single Active Directory domain testking.com. You manage a Win Server 2003 computer named TestKing3. This server hosts all file and print services for the network on NTFS volumes. Tess King is a technical support specialist for TestKing. She belongs only to default groups in Active Directory. She needs the ability to change permissions for files stored in a folder named Data on TestKing3. You share Data and configure the folder permissions shown in the following table. Tess logs on to TestKing3, but she cannot change permissions for any files in Data. How should you solve this problem?

Users	NTFS permissions	Share permissions
TessKing	Read	Full Control
Group 1	Modify	Change
Group 2	Read/Write	Change
Group 3	Full Control	Deny – Read

- A. Remove the Allow - Read NTFS permissions from Tess's user account. Add Tess's user account to Group 1.
- B. Add Tess's user account to Group 3.
- C. Assign the Allow - Full Control share permissions to Group 2. Add Tess's user account to Group 2.
- D. Assign the Allow -Modify NTFS permission to Tess's user account.
2. If we encrypt a file then
- A. No one can open the file
- B. Owner creator and Administrator can open the file
- C. Owner creator and the user with Certificate for this file can open this file
- D. None of the above
3. In *events.training.microsoft.com* the Web Server **Training** is hosted in
- Events
 - Training
 - Microsoft
 - COM
4. Which account lockout policy specifies the number of invalid attempts allowed before an account will be locked out?
- A. Account lockout threshold
- B. Account lockout counter
- C. Account lockout number
- D. Account lockout period
5. Which tool will allow you to FIND accounts that have not been used for two months?
- a. DSADD
- b. DSGET
- c. DSMOD
- d. DSRM
- e. DSQUERY

6. Command for creating a new user (NEO) in command prompt is
- netuser NEO 123 /add
 - net user NEO 123 /del
 - net user NEO 123 /add
 - new user NEO 123/add
7. If the subnet mask is 255.255.255.0 then we can have these many hosts in this network
- 2096
 - 255
 - 254
 - 1048
8. HTTP/S uses this port
- 80
 - 53
 - 443
 - 995
9. The Two parts of Digital Certificates are
- Public and Private key
 - User and Server Key
 - Client and Server Key
 - None of the above
10. Which two ports are commonly used in FTP transmission?
- 23 and 24
 - 21 and 22
 - 20 and 21
 - 22 and 23
 - 24 and 25
11. `netsh firewall set icmpsetting type=ALL mode=enable` will
- Disable Ping response to any client
 - Enable Ping response to any client
 - Disables file access for any client
 - None of the above
12. We need to create this group to send mails to group
- Security Group
 - Local group
 - Distribution group
 - Administrator Group
13. Allow log on Locally Policy is under
- Security settings
 - Administrative Templates
 - Software Installation
 - None of the above

14. Members of which of the following groups can perform multiple domains within a forest?
- a. Administrators
 - b. Site Admins
 - c. Domain Admins
 - d. Schema Admins
 - e. **Enterprise Admins**
15. Rick, a network administrator, wants to ensure that the logon/logoff scripts of all the users in the network are accessible from all the domains. In which of the following shares should he place the scripts?
- a. WINNT32
 - b. **SYSVOL**
 - c. NTDS
 - d. SYSTEM32
16. Edmond is an administrator working in a remote branch office location consisting of less than 10 users. This branch office location is hosting a Windows 2008 RODC for authenticating users in the branch office. Edmond is trying to create new Organizational Unit connecting to his branch office RODC. But he is not able create the OU. Why?
- E. He is not having enough privileges
 - F. The Primary Writable Domain Controller in the main office is down
 - G. **He cannot create, since RODC is a Read-Only copy**
 - H. None
17. The command to change the system name in command prompt is
- a. wmic computer where name="%computer%" rename name="WINSRV1"
 - b. wmic computersystem where name="%computer%" rename name="WINSRV1"
 - c. **wmic computersystem where name="%computername%" rename name="WINSRV1"**
 - d. wmic computersystem where name="%computername%" rename name="%computername%"
 - e.
18. This Command is used to join the system to Domain
- a. **netdom join %computername% /domain:domainname /userd:userid /passwordd:***
 - b. netdom join %computername% /domain:domainname /userd:userid /password:*
 - c. netdom join %computername% /domain:domainname /userd:userid /passwordd:
 - d. None of the above
19. Of the following authentication methods, which is the one not used by IIS 7.0?
- a. Basic Authentication
 - b. **Local Authentication**
 - c. Digest Authentication
 - d. Windows Authentication
20. Network Policy server is used to (Choose all that apply)
- a. **Secure the network**
 - b. Secure the Users
 - c. **Secure the Data**
 - d. None of the above
