

Question	Answer
_____ is a weakness that can be exploited by attackers.	System with vulnerabilities
_____ is the sum of all the possible points in software or system where unauthorized users can enter as well as extract data from the system.	Attack surface
_____ is the cyclic practice for identifying & classifying and then solving the vulnerabilities in a system.	Vulnerability management
_____ is a special type of vulnerability that doesn't possess risk.	Vulnerabilities without risk
A/An _____ is a piece of software or a segment of command that usually take advantage of a bug to cause unintended actions and behaviors.	exploit
There are _____ types of exploit.	2
_____ type of exploit requires accessing to any vulnerable system for enhancing privilege for an attacker to run the exploit.	Local exploits
_____ is a technique used by penetration testers to compromise any system within a network for targeting other systems.	Pivoting
A _____ is a software bug that attackers can take advantage to gain unauthorized access in a system.	Security bug
Security bugs are also known as _____	security defect
_____ is the timeframe from when the loophole in security was introduced till the time when the bug was fixed.	Window of vulnerability
ISMS is abbreviated as _____	Information Security Management System
What is the ethics behind training how to hack a system?	To think like hackers and know how to defend such attacks
_____ has now evolved to be one of the most popular automated tools for unethical hacking.	Malware
The legal risks of ethical hacking include lawsuits due to _____ of personal data.	disclosure
After performing _____ the ethical hacker should	penetration testing

never disclose client information to other parties.	
_____ is the branch of cyber security that deals with morality and provides different theories and a principle regarding the view-points about what is right and wrong.	Ethics in black hat hacking
_____ helps to classify arguments and situations, better understand a cyber-crime and helps to determine appropriate actions.	Cyber-ethics
A penetration tester must identify and keep in mind the _____ & _____ requirements of a firm while evaluating the security postures.	privacy and security
_____ is an activity that takes place when cyber-criminals infiltrates any data source and takes away or alters sensitive information.	Data breach
_____ will give you an USB which will contain _____ that will take control of your system in the background.	Attackers, Trojans
You may throw some confidential file in a dustbin which contains some of your personal data. Hackers can take your data from that thrown-away file also, using the technique _____	Dumpster diving
_____ will encrypt all your system files and will ask you to pay a ransom in order to decrypt all the files and unlock the system.	Ransomware
_____ are special malware programs written by elite hackers and black hat hackers to spy your mobile phones and systems.	Spyware
The attacker will use different bots (zombie PCs) to ping your system and the name of the attack is _____	Distributed Denial-of-Service (DDoS)
Through the clickjacking attack, the employee's confidential _____ may get leaked or stolen.	information
It is very important to block unknown, strange and _____ within the corporate network.	infected sites
_____ has become a popular attack since last few years, and the attacker target board members, high-ranked officials and managing committee members of an organization.	Ransomware
Which of the following do not comes under security	Antivirus

measures for cloud in firms?	
It is important to limit _____ to all data and information as well as limit the authority for installing software.	employee access

How to rename a user defined chain?	Iptables -E
How the MAC module is used in iptables?	-m mac -mac-source xx : xx : xx : xx : xx : xx
Iptables is a	Both a) and b)
Which of the following rule is syntactically incorrect?	Iptables -A INPUT - sport 80 -j DROP
If one wants to block all the traffic routed through his system, in which table he should put the rule?	FORWARD
What tells a firewall how to reassemble a data stream that has been divided into packets?	The number in header's identification field
What is the most effective security approach for a stateless packet filter?	Deny all except specified hosts
The practice of designing operational aspects of a system to work with a minimal amount of system privilege is called?	Least privilege
A stateful firewall maintains a _____, which is a list of active connections.	State table
What is a false negative?	Results when an attack or an intrusion goes undetected
Known vulnerabilities in a application / software are identified by	CVE ID (Common Vulnerabilities and Exposure)
A _____ will monitor network traffic and compare it against an established baseline	Anomaly-based IDS
Print or capture only PSH+ACK packet coming at your interface using tcpdump:	tcpdump 'tcp[13]=8'
You are running Snort in your network to capture network traffic. Based on the following capture, what type of traffic	A secure Web server response

was captured? 04/17-08:47:35.481575 0:A0:CC:58:CC:BF -> 0:80:5F:26:5A:21 type:0x800 len:0x3E 192.168.0.204:4654 -> 192.168.0.1:443 TCP TTL:128 TOS:0x0 ID:27146 IpLen:20 DgmLen:48 *****S* Seq: 0x52B6718E Ack: 0x0 Win: 0x4000 TcpLen: 28 TCP Options (4) => MSS: 1460 NOP NOP SackOK	
Which of the following keyword is not the part of snort rule header	Content
Command to capture all udp packets with destination port 53 and write it to dump.pcap is	none of these
Which of the following function in libpcap is used to determine the IPv4 network number and mask associated with the network device	pcap_lookupnet
Which of the following is important for organizations looking to implement IDS or IPS?	Identification of critical assets and resources
The mechanism in TCP/IP used to track which fragments belong to a given stream is _____	Fragment Identification
Given a packet that contains the string "silkworm" detected in a telnet data stream and the following two rules: alert tcp any any -> any 23 (msg:"Silk1"; content:"silk";) alert tcp any any -> any any (msg:"Silk2"; content:"silkworm";) Which rule contains the most specific content item and would be selected first if the detection engine had to decide which one to alert on?	Silk1
A buffer overflow attack can result in which of the following outcomes?	Both A & B
It is important to understand the affect/impact of networking devices in order to have a successful IDS/IPS deployment. Which of the following is NOT true about network devices:	Hubs only present a datagram to a port for which it is destined
There are four primary components of Snort. Which of the following is NOT one of them:	postprocessors
Running Snort from the command line gives you the ability to read PCAP formatted files. Which of the items below does NOT correctly represent how you could read PCAPs in from the command line?	--pcap-xml=
Which of the following choices best describes what an IPSec VPN generally consists of?	A secure, private tunnel between a

	remote endpoint and a gateway
_____ is a collection of protocols designed by the IETF (Internet Engineering Task Force) to provide security for a packet at the network level.	IPSec
What are the two main types of intrusion detection systems based on detection methodology ?	Misuse and Anomaly
What is the three-way handshake sequence used to initiate TCP connections?	SYN, SYN/ACK, ACK
-----is not an access attack	Non repudiation
Which among the following authentication is the weakest?	Pass phrase

A firewall is a network security system _____based that controls incoming and outgoing network traffic based on a set of rules:	Hardware & Software
Network layer firewall works as a	Packet filter
Network layer firewall has two sub-categories as	State full firewall and stateless firewall
A firewall is installed at the point where the secure internal network and untrusted external network meet which is also known as _____	Chock point
A proxy firewall filters at?	Application layer
A packet filter firewall filters at?	Network layer or Transport layer
What is one advantage of setting up a DMZ with two firewalls?	You can do load balancing
When discussing IDS / IPS, what is a signature?	Attack-definitionfile
What is the purpose of a shadow honeypot?	To randomly check suspicious traffic identified by an anomaly detection system.
Write the command to capture only 500 packets from dump.pcap using tcpdump.	tcpdump -c 500 dump.pcap
The _____ option of Tcpdump is used to print the link-layer	-e

header.	
How many built-in tables are in iptables	5
In OpenVPN, the option _____ is used to enable compression on the VPN Link.	comp-lzo
The enterprise administrator has seen an increase in the number of ping flood attacks on the web server in the DMZ (Demilitarized Zone). How can the administrator mitigate the attacks and prevent the web server from crashing?	Block ICMP Echo 8 packets on the external firewall
Assault on system security that derives from an intelligent threat.	Attack
Which of the following best describes an attack that altered the contents of two critical files?	Integrity
Port # 137 is related with:	NETBIOS Name Service
In iptables, the RAW table consists of _____ built-in chains:	2
On a linux machine, all of the connection tracking is done by special framework within the kernel called_____.	conntrack
In iptables, the MANGLE table consists of _____ built-in chains:	5
In iptables, the _____ table is responsible for the alteration of quality of service bits in the TCP header	MANGLE
In iptables, the POSTROUTING chain in the NAT table is used for _____	SNAT
A _____ allows a host on the "outside" to connect to a host on the "inside".	SNAT
Netfilter is a _____Module	Kernel Space
A stateful inspection firewall maintains a _____ table that is constantly updated based on the full inspection of communication flow through the firewall.	state
In an SPI firewall, the inspection engine operates at the _____ layer.	network
To see the ephemeral port range in Linux:	cat /proc/sys/net/ipv4/ip_local_port_range
A _____ is also known as sacrificed host.	Bastion Host

A _____ is a system that has been hardened to resist attack, and which is installed on a network in such a way that it is expected to potentially come under attack.	Firewall
A _____ combines a packet-filtering router with an application gateway located on the protected subnet side of the router.	Screened host firewall
Which of the following command is used to view and modify the ACL of a file in Windows?	Icacs
Cold boot attack is an attack on _____	Cryptographic Systems
The act of locating and possibly exploiting connections to wireless LANs while driving around a city or elsewhere is known as:	War Driving
SSL is replaced by _____	TLS
Any potential danger to information or systems is known as	Threat
Weakness in a mechanism that can threaten the Confidentiality, Integrity, or Availability of an asset is known as _____	Vulnerability
Which of the following is an IPSec Mode?	Transport Mode
Which of the following, best describes the difference between an intrusion detection system and a firewall?	Firewalls control the information coming in and out of the network, whereas IDSs identify unauthorized activity
What tool would you use to monitor for intrusions by reviewing computer system and event logs on a client computer?	Honeypot
