

**Q1.** What is the default file system used by modern versions of Windows?

- A) FAT32
- B) exFAT
- C) NTFS
- D) EXT4

**Answer:** C) NTFS

**Explanation:** NTFS (New Technology File System) is the standard file system for modern Windows versions due to its support for permissions, encryption, and large files.

---

**Q2.** Which key is commonly used to access the BIOS or UEFI setup during boot?

- A) F1
- B) F2
- C) F12
- D) Both B and C

**Answer:** D) Both B and C

**Explanation:** Most systems use F2 or F12 to access BIOS/UEFI; it varies by manufacturer.

---

**Q3.** Which Windows version introduced the Start menu?

- A) Windows 1.0
- B) Windows XP
- C) Windows 95

D) Windows 10

**Answer:** C) Windows 95

**Explanation:** Windows 95 introduced the iconic Start menu.

---

**Q4.** What is the purpose of the Windows Task Manager?

- A) Manage users
- B) Browse the internet
- C) Manage processes and system performance
- D) Defragment the disk

**Answer:** C) Manage processes and system performance

**Explanation:** Task Manager allows users to end tasks, monitor CPU/memory usage, and more.

---

**Q5.** What does UAC stand for?

- A) Universal Access Control
- B) User Access Control
- C) User Account Control
- D) Unified Account Center

**Answer:** C) User Account Control

**Explanation:** UAC helps prevent unauthorized changes by prompting the user.

---

**Q6.** Windows 11 requires which of the following security modules to be enabled?

- A) TPM 2.0
- B) BitLocker
- C) Hyper-V
- D) BIOS

**Answer:** A) TPM 2.0

**Explanation:** Windows 11 mandates TPM 2.0 for enhanced security.

---

**Q7.** Which tool can be used to create a bootable Windows USB?

- A) Disk Cleanup
- B) Rufus
- C) Device Manager
- D) Notepad

**Answer:** B) Rufus

**Explanation:** Rufus creates bootable USB drives using ISO files.

---

**Q8.** The graphical interface of Windows is also known as:

- A) BIOS

- B) CLI
- C) GUI
- D) EFI

**Answer:** C) GUI

**Explanation:** Windows provides a Graphical User Interface (GUI) for ease of use.

---

**Q9.** Which Windows edition is primarily for enterprise-level usage?

- A) Windows Home
- B) Windows Pro
- C) Windows Enterprise
- D) Windows Student

**Answer:** C) Windows Enterprise

**Explanation:** Windows Enterprise is designed for large organizations.

---

**Q10.** What is the purpose of Safe Mode in Windows?

- A) Normal operation
- B) Run high-performance apps
- C) Diagnose and fix issues
- D) Install new hardware

**Answer:** C) Diagnose and fix issues

**Explanation:** Safe Mode loads a minimal set of drivers and services to troubleshoot problems.

---

## ☒ MEDIUM LEVEL (20 Questions)

---

**Q11.** Which of the following is part of the Windows Executive Services?

- A) Control Panel
- B) Disk Manager
- C) Object Manager
- D) Windows Defender

**Answer:** C) Object Manager

**Explanation:** Object Manager handles OS resources like files and devices within the Executive layer.

---

**Q12.** The HAL in Windows is responsible for:

- A) Managing antivirus programs
- B) Managing user permissions
- C) Abstracting hardware from the OS
- D) Installing applications

**Answer:** C) Abstracting hardware from the OS

**Explanation:** The Hardware Abstraction Layer hides hardware differences.

---

**Q13.** What type of kernel is used in Windows OS?

- A) Microkernel
- B) Monolithic
- C) Hybrid kernel
- D) None of the above

**Answer:** C) Hybrid kernel

**Explanation:** Windows uses a hybrid kernel combining aspects of microkernel and monolithic design.

---

**Q14.** BitLocker is used for:

- A) Removing malware
- B) Encrypting drives
- C) Formatting partitions
- D) Creating user accounts

**Answer:** B) Encrypting drives

**Explanation:** BitLocker provides full disk encryption to secure data.

---

**Q15.** To perform a clean installation of Windows, which option must you select during setup?

- A) Upgrade
- B) Restore
- C) Custom (Advanced)
- D) Format

**Answer:** C) Custom (Advanced)

**Explanation:** This option allows disk partitioning and fresh installation.

---

**Q16.** What is the main function of the Windows Registry?

- A) Manage running processes
- B) Store hardware drivers
- C) Store system and application configuration data
- D) Log user activities

**Answer:** C) Store system and application configuration data

**Explanation:** The Registry is a hierarchical database for system settings.

---

**Q17.** Which tool is used to manage partitions in Windows?

- A) Disk Cleanup
- B) Task Manager
- C) Disk Management
- D) System Restore

**Answer:** C) Disk Management

**Explanation:** Disk Management allows you to create, delete, and format partitions.

---

**Q18.** Windows Performance Monitor is mainly used to:

- A) Clean RAM
- B) Track and analyze system performance
- C) Install drivers
- D) Recover files

**Answer:** B) Track and analyze system performance

**Explanation:** It provides detailed statistics about CPU, memory, and disk.

---

**Q19.** Which command-line tool allows you to manage system images and drivers?

- A) DISM
- B) ipconfig
- C) ping
- D) netstat

**Answer:** A) DISM

**Explanation:** Deployment Image Servicing and Management (DISM) tool is used for system image maintenance.

---

**Q20.** What file system does Windows recommend for SSDs and internal drives?

- A) FAT32
- B) exFAT
- C) NTFS
- D) RAW

**Answer:** C) NTFS

**Explanation:** NTFS is preferred due to support for large files, permissions, and recovery features.

---

**Q21.** What is the function of Secure Boot?

- A) Speed up boot time
- B) Detect hard drive failures
- C) Prevent unauthorized OS from loading
- D) Manage boot order

**Answer:** C) Prevent unauthorized OS from loading

**Explanation:** Secure Boot checks for signed software at boot time.

---

**Q22.** The Windows feature that isolates system files from malware is:

- A) Windows Defender
- B) File History
- C) Windows Sandbox

D) User Account Control

**Answer:** D) User Account Control

**Explanation:** UAC prevents unauthorized changes by requesting elevated permissions.

---

**Q23.** What does "sysprep" do during Windows deployment?

- A) Restores registry
- B) Prepares the system for imaging and deployment
- C) Formats the disk
- D) Installs drivers

**Answer:** B) Prepares the system for imaging and deployment

**Explanation:** sysprep generalizes the OS to deploy on multiple machines.

---

**Q24.** Which component controls hardware-level communication in Windows?

- A) Device Manager
- B) I/O Manager
- C) HAL
- D) Windows Shell

**Answer:** C) HAL

**Explanation:** HAL abstracts and manages hardware-level communication.

---

**Q25.** What does the “Media Creation Tool” primarily do?

- A) Repairs Windows
- B) Installs device drivers
- C) Creates bootable installation media
- D) Updates antivirus

**Answer:** C) Creates bootable installation media

**Explanation:** It downloads Windows ISO and prepares USB/DVD installers.

---

**Q26.** What happens if you delete a system partition during installation?

- A) Windows will install on another partition
- B) You lose the bootloader
- C) It will speed up installation
- D) It skips formatting

**Answer:** B) You lose the bootloader

**Explanation:** Deleting the system partition removes the boot files needed to load the OS.

---

**Q27.** What is a major reason to use NTFS over FAT32?

- A) Compatibility

- B) Smaller file sizes
- C) Supports file permissions and security
- D) Faster USB boot

**Answer:** C) Supports file permissions and security

**Explanation:** NTFS is more secure and supports larger files and encryption.

---

**Q28.** What is the function of the I/O Manager in Windows?

- A) Control CPU scheduling
- B) Manage disk and peripheral access
- C) Handle network communication
- D) Encrypt files

**Answer:** B) Manage disk and peripheral access

**Explanation:** It coordinates input/output between devices and applications.

---

**Q29.** Which of the following allows access to Windows recovery options?

- A) Ctrl+Alt+Del
- B) F8 during boot
- C) Shift + Restart
- D) Alt + Tab

**Answer:** C) Shift + Restart

**Explanation:** Holding Shift while clicking Restart opens recovery tools.

---

**Q30.** Which Windows tool can be used to monitor real-time CPU usage?

- A) File Explorer
- B) Registry Editor
- C) Event Viewer
- D) Task Manager

**Answer:** D) Task Manager

**Explanation:** Task Manager shows real-time performance of system resources.

---

## ☒ HARD LEVEL (10 Questions)

---

**Q31.** Which Windows component is responsible for defining and managing all system resources like processes, threads, and memory?

- A) Device Manager
- B) Windows Kernel
- C) Control Panel
- D) Winlogon

**Answer:** B) Windows Kernel

**Explanation:** The Kernel manages low-level OS operations and system resources.

---

**Q32.** How does Windows implement thread scheduling in multiprocessor systems?

- A) Round-robin only
- B) Priority-based preemptive scheduling
- C) FIFO scheduling
- D) Random time slicing

**Answer:** B) Priority-based preemptive scheduling

**Explanation:** Windows uses a priority-based preemptive scheduler to optimize multitasking.

---

**Q33.** What is the difference between Kernel Mode and User Mode in Windows?

- A) Kernel Mode can access hardware, User Mode cannot
- B) User Mode has full access
- C) Both have same privileges
- D) User Mode manages security

**Answer:** A) Kernel Mode can access hardware, User Mode cannot

**Explanation:** Kernel Mode has full privileges; User Mode is restricted.

---

**Q34.** Which subsystem translates Win32 API calls into kernel calls?

- A) Hardware Abstraction Layer
- B) Object Manager
- C) Win32 Subsystem
- D) Shell32.dll

**Answer:** C) Win32 Subsystem

**Explanation:** The Win32 subsystem enables GUI app compatibility by translating API calls.

---

**Q35.** What is the role of the Security Reference Monitor (SRM) in Windows architecture?

- A) Defragment disks
- B) Enforce access control policies
- C) Monitor CPU usage
- D) Load DLLs

**Answer:** B) Enforce access control policies

**Explanation:** SRM ensures users only access authorized resources.

---

**Q36.** Which of the following file systems supports file-level encryption by default?

- A) FAT32
- B) NTFS
- C) exFAT
- D) EXT3

**Answer:** B) NTFS

**Explanation:** NTFS supports EFS (Encrypting File System) for file-level encryption.

---

**Q37.** Which utility can be used to modify the Windows boot configuration data (BCD)?

- A) bootrec
- B) msconfig
- C) bcdedit
- D) diskpart

**Answer:** C) bcdedit

**Explanation:** bcdedit edits boot configuration data used during startup.

---

**Q38.** In Windows installation, which tool can be used to automate the deployment process?

- A) Windows Defender
- B) Sysprep
- C) Group Policy
- D) Task Scheduler

**Answer:** B) Sysprep

**Explanation:** Sysprep prepares a reference system image for deployment.

---

**Q39.** During Windows installation, what is the impact of using GPT partitioning over MBR?

- A) GPT only works on 32-bit OS
- B) GPT supports larger disks and more partitions
- C) GPT is slower
- D) MBR supports UEFI

**Answer:** B) GPT supports larger disks and more partitions

**Explanation:** GPT supports disks over 2 TB and more than 4 partitions.

---

**Q40.** Which command can be used in Windows RE to scan and repair system image corruption?

- A) chkdsk
- B) sfc /scannow
- C) dism /restorehealth
- D) fixboot

**Answer:** C) dism /restorehealth

**Explanation:** DISM scans and restores corrupted system files using the correct Windows image.
