

☒ Easy (10 Questions)

1. What does IIS stand for?

- A. Internet Internal Service
- B. Integrated Internet System
- C. Internet Information Services
- D. Internal Integration Services

Answer: C

Explanation: IIS stands for Internet Information Services, Microsoft's web server.

2. Which operating system is IIS native to?

- A. macOS
- B. Linux
- C. Windows
- D. Android

Answer: C

Explanation: IIS is developed by Microsoft and is native to Windows.

3. What port does HTTP typically use?

- A. 25
- B. 443

- C. 21
- D. 80

Answer: D

Explanation: HTTP uses port 80, while HTTPS uses port 443.

4. Which feature allows IIS to host multiple web apps with isolation?

- A. Virtual Directories
- B. Sites
- C. Application Pools
- D. FTP Services

Answer: C

Explanation: Application pools isolate web apps for better reliability and security.

5. Which protocol is used for secure communication in IIS?

- A. FTP
- B. SMTP
- C. HTTPS
- D. HTTP

Answer: C

Explanation: HTTPS uses SSL/TLS for encrypted communication.

6. What is the default directory for websites in IIS?

- A. C:\Web\
- B. C:\inetpub\wwwroot
- C. C:\Program Files\IIS
- D. C:\Windows\System32

Answer: B

Explanation: This is the standard root directory for IIS websites.

7. Which IIS component allows you to configure the server graphically?

- A. Command Prompt
- B. IIS Manager
- C. Event Viewer
- D. Firewall Settings

Answer: B

Explanation: IIS Manager is the GUI tool for managing IIS settings.

8. Which file in IIS stores application-specific settings?

- A. system.ini
- B. hosts
- C. web.config
- D. boot.ini

Answer: C

Explanation: web.config is used to store ASP.NET app settings.

9. What is the role of a binding in IIS?

- A. Stops the server
- B. Specifies IP and port for a site
- C. Manages memory
- D. Connects to SQL

Answer: B

Explanation: Binding defines how IIS listens for incoming traffic.

10. Which module handles URL rewriting in IIS?

- A. ARR
- B. FTP
- C. URL Rewrite
- D. SMTP

Answer: C

Explanation: The URL Rewrite module modifies URLs at runtime.

☒ Medium (20 Questions)

11. What is the name of the process that runs web applications in IIS?

- A. svchost.exe

- B. services.exe
- C. w3wp.exe
- D. explorer.exe

Answer: C

Explanation: w3wp.exe is the IIS Worker Process.

12. Which IIS version introduced support for modular architecture?

- A. IIS 5.0
- B. IIS 6.0
- C. IIS 7.0
- D. IIS 10.0

Answer: C

Explanation: IIS 7.0 was redesigned with a modular architecture.

13. How can you run IIS configuration scripts?

- A. Batch scripts only
- B. IIS GUI
- C. PowerShell
- D. JavaScript

Answer: C

Explanation: PowerShell supports scripting for IIS administration.

14. What does an application pool do in IIS?

- A. Combines apps
- B. Shares memory
- C. Isolates apps in separate processes
- D. Hosts databases

Answer: C

Explanation: Application pools isolate apps to prevent one from affecting others.

15. What is ARR in IIS?

- A. Application Remote Rerouting
- B. Advanced Reporting & Redirection
- C. Application Request Routing
- D. Azure Resource Router

Answer: C

Explanation: ARR is a module used for load balancing and reverse proxy.

16. Where are server-wide settings stored in IIS?

- A. server.config
- B. hosts
- C. web.config
- D. applicationHost.config

Answer: D

Explanation: applicationHost.config holds global IIS settings.

17. Which of the following allows non-Windows users to authenticate in IIS?

- A. Windows Auth
- B. Digest Auth
- C. Basic Auth
- D. NTLM

Answer: C

Explanation: Basic Auth is simple and works across platforms (but not secure without HTTPS).

18. What is the purpose of failed request tracing in IIS?

- A. Logs DNS failures
- B. Captures memory usage
- C. Diagnoses failed HTTP requests
- D. Traces route path

Answer: C

Explanation: It helps developers understand why requests failed.

19. What is the default port for HTTPS?

- A. 25
- B. 443
- C. 110
- D. 80

Answer: B

Explanation: HTTPS uses port 443.

20. What file extension does a request to ASP.NET pages typically have?

- A. .html
- B. .asp
- C. .php
- D. .aspx

Answer: D

Explanation: .aspx is used for ASP.NET Web Forms.

21. Which feature improves performance by serving cached content in IIS?

- A. Request Filtering
- B. Output Caching
- C. Authentication
- D. URL Rewrite

Answer: B

Explanation: Output Caching boosts performance by storing response data.

22. How can you secure IIS traffic using certificates?

- A. Add Firewall Rules
- B. Disable Logging
- C. Use SSL/TLS
- D. Block Port 80

Answer: C

Explanation: SSL/TLS secures data in transit.

23. Which authentication method in IIS uses Active Directory credentials?

- A. Basic
- B. Forms
- C. Windows Authentication
- D. Anonymous

Answer: C

Explanation: Windows Auth integrates with Active Directory.

24. What is the purpose of a virtual directory in IIS?

- A. Create an admin account
- B. Host mail server
- C. Map URL path to folder outside root
- D. Hide real server IP

Answer: C

Explanation: Virtual directories point to content outside the site root.

25. IIS logs are typically saved in which format?

- A. .log
- B. .txt
- C. .iis
- D. .xml

Answer: A

Explanation: IIS logs are plain .log files.

26. What does MIME type configuration control?

- A. Authentication
- B. Caching rules
- C. File type handling
- D. Site speed

Answer: C

Explanation: MIME types tell IIS how to serve specific file extensions.

27. What is an SSL certificate used for in IIS?

- A. Storing logs
- B. Encrypting traffic
- C. Serving images faster
- D. Rewriting URLs

Answer: B

Explanation: SSL certificates enable encrypted HTTPS connections.

28. Which component ensures app crashes don't affect other apps?

- A. Virtual Directory
- B. MIME Types
- C. Application Pool

D. Logging Module

Answer: C

Explanation: App Pools provide isolation to prevent cross-impact.

29. Which file does IIS use to define application-specific behavior?

A. boot.ini

B. applicationHost.config

C. web.config

D. groupPolicy.xml

Answer: C

Explanation: Each ASP.NET app uses web.config for app-level configuration.

30. What is one use of IIS Request Filtering?

A. Logging user requests

B. Blocking harmful requests

C. Emailing logs

D. Connecting to databases

Answer: B

Explanation: Request filtering prevents dangerous or malformed requests.

☒ **Hard (10 Questions)**

31. Which PowerShell cmdlet adds a new IIS website?

- A. Add-WebApplication
- B. New-Website
- C. New-IISSite
- D. New-WebSite

Answer: D

Explanation: New-WebSite creates a new site in IIS via PowerShell.

32. How does IIS handle multiple websites on the same server?

- A. Virtual Memory
- B. Port Binding and Host Headers
- C. Session Management
- D. Web Gardens

Answer: B

Explanation: IIS uses unique bindings (IP + port + hostname) to differentiate.

33. What is a web garden in IIS?

- A. Cluster of servers
- B. Multiple worker processes per app pool
- C. HTTP cache group
- D. IIS server farm

Answer: B

Explanation: A web garden allows more than one worker process per app pool.

34. What does the IIS ARR module use for routing decisions?

- A. Static IP list
- B. DNS records only
- C. Rewrite rules and server variables
- D. FTP rules

Answer: C

Explanation: ARR uses rewrite rules, server variables, and load balance rules.

35. Which tool exports complete IIS site configurations?

- A. IIS Manager
- B. Web Deploy (MSDeploy)
- C. Task Scheduler
- D. Windows Backup

Answer: B

Explanation: MSDeploy supports exporting/importing site config and content.

36. In IIS, what does "idle timeout" setting do in app pools?

- A. Recycles app pools regularly
- B. Kills session state
- C. Stops inactive worker processes

D. Logs out users

Answer: C

Explanation: Idle timeout conserves resources by shutting down idle processes.

37. How does IIS handle failed application pool recycling?

A. Keeps running

B. Disables logs

C. Stops site

D. Logs errors and can stop the pool

Answer: D

Explanation: IIS logs failures and may disable the pool to prevent further issues.

38. What tool helps trace deep request pipeline failures in IIS?

A. URL Rewrite

B. ARR

C. Failed Request Tracing (FREQ)

D. Performance Monitor

Answer: C

Explanation: FREQ helps debug detailed request failures.

39. Which logging format is most detailed in IIS?

A. NCSA

- B. W3C Extended
- C. IIS Native
- D. Simple Log

Answer: B

Explanation: W3C Extended Logging is customizable and detailed.

40. Which IIS module is required for running PHP apps?

- A. ISAPI Filters
- B. ASP.NET Core Module
- C. FastCGI
- D. ARR

Answer: C

Explanation: FastCGI enables non-native language support, like PHP.
