

Easy (10)

1.

What is Microsoft Exchange Server primarily used for?

- a) Web hosting
- b) Email and calendaring services
- c) File sharing
- d) Database management

Answer: b) Email and calendaring services

Explanation: Exchange Server is mainly used for enterprise email, calendaring, and collaboration.

2.

Which Windows component does Exchange Server tightly integrate with?

- a) IIS
- b) Active Directory
- c) Hyper-V
- d) DHCP

Answer: b) Active Directory

Explanation: Exchange uses Active Directory for user authentication and policy management.

3.

Which client protocol is NOT used by Exchange Server?

- a) IMAP
- b) SMTP
- c) FTP
- d) MAPI

Answer: c) FTP

Explanation: FTP is unrelated to email services; Exchange uses IMAP, SMTP, and MAPI.

4.

What feature allows Exchange to provide high availability for mailbox databases?

- a) Clustering
- b) DAG (Database Availability Group)
- c) RAID
- d) Backup and restore

Answer: b) DAG (Database Availability Group)

Explanation: DAG replicates mailbox databases across servers for redundancy.

5.

Which service allows mobile devices to sync email and calendar with Exchange?

- a) LDAP
- b) Exchange ActiveSync
- c) FTP
- d) SMB

Answer: b) Exchange ActiveSync

Explanation: ActiveSync is a protocol for synchronizing mobile devices with Exchange.

6.

Which protocol does Exchange use to send outgoing emails to other mail servers?

- a) POP3
- b) SMTP
- c) IMAP
- d) HTTP

Answer: b) SMTP

Explanation: SMTP is used for sending emails externally.

7.

What is the web-based email access interface provided by Exchange Server called?

- a) Outlook Web Access (OWA)

- b) Remote Desktop
- c) SharePoint
- d) OneDrive

Answer: a) Outlook Web Access (OWA)

Explanation: OWA allows users to access email via web browsers.

8.

Which Exchange Server role handles mailbox storage?

- a) Client Access Server
- b) Mailbox Server
- c) Edge Transport Server
- d) Hub Transport Server

Answer: b) Mailbox Server

Explanation: Mailbox Server stores user mailboxes and manages mailbox databases.

9.

Which of these is NOT a feature of Exchange Server?

- a) Email
- b) Calendar
- c) DNS management
- d) Task management

Answer: c) DNS management

Explanation: DNS is managed by Windows Server/DNS services, not Exchange.

10.

What does RBAC stand for in Exchange Server security?

- a) Role-Based Access Control
- b) Remote Backup and Access Control
- c) Real-time Backup Access Control
- d) Remote Browser Access Control

Answer: a) Role-Based Access Control

Explanation: RBAC manages permissions based on roles assigned to users.

Medium (20)

11.

Which Exchange component processes all inbound and outbound mail flow?

- a) Mailbox Transport Service
- b) Transport Service
- c) Client Access Service
- d) Unified Messaging Service

Answer: b) Transport Service

Explanation: Transport Service routes mail within and outside the organization.

12.

What is the purpose of the Edge Transport Server role?

- a) Handle mailbox storage
- b) Provide web access
- c) Provide email security and route mail at the network perimeter
- d) Manage Active Directory replication

Answer: c) Provide email security and route mail at the network perimeter

Explanation: Edge Transport servers sit in the DMZ to protect internal Exchange servers.

13.

Which PowerShell cmdlet is used to check the health of mailbox databases in Exchange?

- a) Get-MailboxDatabaseCopyStatus
- b) Test-Mailflow
- c) Get-DatabaseHealth
- d) Check-Mailbox

Answer: a) Get-MailboxDatabaseCopyStatus

Explanation: It provides the replication and copy status of mailbox databases.

14.

Which feature helps organizations meet legal requirements for preserving emails?

- a) Archiving
- b) Mail flow rules
- c) Anti-spam filters
- d) Outlook rules

Answer: a) Archiving

Explanation: Archiving stores emails for long-term retention.

15.

Which of the following is a new simplified architecture introduced in Exchange 2013 and later?

- a) Separate Mailbox and Hub Transport roles
- b) Combined Mailbox and Client Access roles
- c) Edge server for mailbox storage
- d) No client access service

Answer: b) Combined Mailbox and Client Access roles

Explanation: Exchange 2013 and later combine roles to simplify deployment.

16.

How does Exchange ensure secure email transport over the internet?

- a) VPN tunnels
- b) TLS encryption
- c) FTP encryption

d) SSH tunnels

Answer: b) TLS encryption

Explanation: Transport Layer Security (TLS) encrypts emails during transmission.

17.

Which of these is NOT a supported mailbox database replication method in Exchange DAG?

a) Continuous Replication

b) Snapshots

c) Lagged Copy

d) Manual Backup

Answer: d) Manual Backup

Explanation: DAG replicates continuously or with lag, backups are separate.

18.

What protocol does Outlook use to connect to Exchange in modern deployments?

a) MAPI over HTTP

b) POP3

c) IMAP

d) FTP

Answer: a) MAPI over HTTP

Explanation: MAPI over HTTP is the preferred protocol for Outlook-Exchange connectivity.

19.

Which cmdlet in Exchange Management Shell is used to create a new mailbox?

a) New-Mailbox

b) Add-Mailbox

c) Create-Mailbox

d) Install-Mailbox

Answer: a) New-Mailbox

Explanation: New-Mailbox creates new mailboxes in Exchange.

20.

Which service in Exchange Server manages mobile device policies?

- a) Mobile Device Mailbox Policies
- b) ActiveSync Service
- c) Outlook Mobile Policy
- d) Device Management Service

Answer: a) Mobile Device Mailbox Policies

Explanation: These policies control device synchronization and security.

21.

Which is the primary protocol used by Exchange servers to communicate between themselves?

- a) SMTP
- b) HTTP
- c) RPC (Remote Procedure Call)
- d) IMAP

Answer: c) RPC (Remote Procedure Call)

Explanation: RPC was used traditionally; now, MAPI over HTTP is used.

22.

What is the benefit of DAG lagged copies?

- a) Reduce disk usage
- b) Provide a delay for recovery from logical corruption
- c) Increase replication speed
- d) None of the above

Answer: b) Provide a delay for recovery from logical corruption

Explanation: Lagged copies allow recovery from accidental deletions or corruption.

23.

Which component provides Outlook Web Access in Exchange?

- a) Client Access Server
 - b) Mailbox Server
 - c) Edge Transport Server
 - d) Hub Transport Server
- Answer:** a) Client Access Server

Explanation: The Client Access Server role handles web client connections.

24.

Which mailbox feature allows multiple users to access the same mailbox?

- a) Shared Mailbox
 - b) Personal Mailbox
 - c) Public Folder
 - d) Archive Mailbox
- Answer:** a) Shared Mailbox

Explanation: Shared mailboxes enable multiple users to read/send emails from one mailbox.

25.

Which of the following is NOT part of the Exchange transport pipeline?

- a) SMTP Receive
 - b) Transport Rules
 - c) Store Driver
 - d) DNS Server
- Answer:** d) DNS Server

Explanation: DNS is external; Exchange transport pipeline handles message processing.

26.

What is the main purpose of Exchange's Role-Based Access Control (RBAC)?

- a) To restrict mailbox size
- b) To manage administrative permissions
- c) To block spam emails

d) To synchronize mobile devices

Answer: b) To manage administrative permissions

Explanation: RBAC controls what administrators can do in Exchange.

27.

Which of these is the default port for SMTP in Exchange?

a) 25

b) 80

c) 443

d) 110

Answer: a) 25

Explanation: SMTP normally listens on port 25 for mail transfer.

28.

Which PowerShell cmdlet tests mail flow in Exchange?

a) Test-Mailflow

b) Check-Mailflow

c) Test-ExchangeConnectivity

d) Get-MailflowStatus

Answer: a) Test-Mailflow

Explanation: Test-Mailflow checks email sending/receiving.

29.

What is the function of the Transport Dumpster?

a) Stores backup emails

b) Holds copies of messages for recovery in DAG failover

c) Stores deleted emails

d) Archives old emails

Answer: b) Holds copies of messages for recovery in DAG failover

Explanation: Transport Dumpster helps replay messages after failover.

30.

Which Exchange feature helps prevent email spoofing?

- a) SPF (Sender Policy Framework)
- b) SMTP
- c) DAG
- d) RBAC

Answer: a) SPF (Sender Policy Framework)

Explanation: SPF validates sender addresses to reduce spoofing.

Hard (10)

31.

In Exchange DAG, what is the maximum number of mailbox database copies supported?

- a) 4
- b) 8
- c) 16
- d) 32

Answer: c) 16

Explanation: Exchange supports up to 16 copies of a mailbox database.

32.

What cmdlet is used to enable mailbox auditing in Exchange?

- a) Set-Mailbox -AuditEnabled \$true
- b) Enable-MailboxAudit
- c) New-MailboxAudit

d) Start-MailboxAudit

Answer: a) Set-Mailbox -AuditEnabled \$true

Explanation: This cmdlet turns on auditing for the mailbox.

33.

Which component is responsible for message categorization in the Exchange transport pipeline?

a) Routing Engine

b) Categorizer

c) Delivery Agent

d) Mailbox Transport Service

Answer: b) Categorizer

Explanation: The categorizer decides message routing, recipient resolution, and policies.

34.

Which database recovery model does Exchange use?

a) Simple

b) Bulk-logged

c) Full

d) Mixed

Answer: c) Full

Explanation: Exchange databases use the Full recovery model to allow transaction log replay.

35.

What is the maximum supported mailbox size in Exchange 2019 (default setting)?

a) 2 GB

b) 10 GB

c) 50 GB

d) 100 GB

Answer: c) 50 GB

Explanation: Default mailbox size limit is 50 GB but can be adjusted.

36.

Which Exchange cmdlet lists all transport rules configured in an organization?

- a) Get-TransportRule
- b) List-TransportRule
- c) Show-TransportRule
- d) Get-MailTransportRule

Answer: a) Get-TransportRule

Explanation: Lists all mail flow transport rules.

37.

What feature allows Exchange to defer delivery of a message due to transient failures?

- a) Poison message queue
- b) Retry mechanism in Transport service
- c) Transport Dumpster
- d) Anti-spam quarantine

Answer: b) Retry mechanism in Transport service

Explanation: Exchange retries delivery on temporary failures.

38.

Which protocol is deprecated for Outlook to Exchange communication?

- a) MAPI over HTTP
- b) RPC over HTTP (Outlook Anywhere)
- c) POP3
- d) IMAP

Answer: b) RPC over HTTP (Outlook Anywhere)

Explanation: MAPI over HTTP replaced RPC over HTTP for better performance.

39.

Which Exchange feature is used to enforce organizational message size limits?

- a) Transport Rules
- b) Mailbox Quotas
- c) Throttling Policies
- d) Message Size Limits

Answer: d) Message Size Limits

Explanation: Message size limits control max email size allowed.

40.

What tool allows for bulk import of PST files into Exchange mailboxes?

- a) PST Import Service
- b) Mailbox Replication Service (MRS)
- c) Exchange Management Shell
- d) Outlook Import Wizard

Answer: b) Mailbox Replication Service (MRS)

Explanation: MRS is used for mailbox moves and PST imports.
