

1. What does ADDS stand for?

- A) Active Device Directory Services
- B) Active Directory Domain Services
- C) Advanced Domain Deployment System
- D) Active Domain Delivery System

Answer: B

Explanation: ADDS stands for Active Directory Domain Services.

2. Which tool is commonly used to manage users and groups in Active Directory?

- A) Device Manager
- B) DNS Manager
- C) Active Directory Users and Computers (ADUC)
- D) Services.msc

Answer: C

Explanation: ADUC is the main GUI for managing AD objects.

3. What type of account is created for each user in an Active Directory environment?

- A) Local account
- B) Administrator account
- C) Domain user account
- D) Guest account

Answer: C

Explanation: Domain user accounts are centrally managed in AD.

4. What is the main purpose of a security group?

- A) Monitor network traffic
- B) Send emails
- C) Assign permissions
- D) Track file usage

Answer: C

Explanation: Security groups manage access control and permissions.

5. What is the main purpose of a Domain Controller?

- A) Store user profiles
- B) Host applications
- C) Authenticate users and enforce security policies
- D) Scan viruses

Answer: C

Explanation: The Domain Controller manages authentication and security.

6. What is NTDS.dit?

- A) A DNS zone file
- B) The AD database
- C) A driver
- D) An executable

Answer: B

Explanation: NTDS.dit is the file where AD stores directory data.

7. What operating system roles does a Domain Controller hold?

- A) DHCP and FTP
- B) File Server
- C) Active Directory and usually DNS
- D) Firewall and IDS

Answer: C

Explanation: DCs typically hold ADDS and DNS roles.

8. What command is used to install ADDS via PowerShell?

- A) Install-ADDSService
- B) Add-WindowsFeature
- C) Install-WindowsFeature -Name AD-Domain-Services
- D) Setup-ADDomain

Answer: C

Explanation: This is the correct PowerShell syntax for installing ADDS.

9. Which of the following is not a group scope?

- A) Domain Local
- B) Global
- C) Enterprise
- D) Universal

Answer: C

Explanation: Enterprise is not a valid group scope.

10. What does ADC stand for in Active Directory context?

- A) Active Directory Console
- B) Additional Domain Controller
- C) Application Data Center
- D) Administrator Domain Configuration

Answer: B

Explanation: ADC means Additional Domain Controller.

☒ Medium (20 Questions)

11. Which service is typically integrated with ADDS for name resolution?

- A) SNMP
- B) FTP
- C) DNS
- D) SMTP

Answer: C

Explanation: DNS is integrated to resolve names to IPs in AD.

12. What is the first Domain Controller in a forest called?

- A) Primary DC

- B) Root DC
- C) Schema Master
- D) Forest Root Domain Controller

Answer: D

Explanation: It holds all forest-wide FSMO roles initially.

13. Which group type is used for email distribution but not for assigning permissions?

- A) Security Group
- B) Distribution Group
- C) Global Group
- D) Domain Local Group

Answer: B

Explanation: Distribution groups are only for email.

14. What allows a user to authenticate on any machine within the domain?

- A) Local policy
- B) Domain policy
- C) Domain user account
- D) Local user account

Answer: C

Explanation: Domain accounts provide network-wide access.

15. What are FSMO roles used for in Active Directory?

- A) Defining DNS zones
- B) Backup policies
- C) Preventing replication
- D) Special operations and coordination tasks

Answer: D

Explanation: FSMO roles prevent conflicts in AD operations.

16. What must be done before promoting a server to a DC?

- A) Configure SNMP
- B) Remove local accounts
- C) Install ADDS role
- D) Delete all shares

Answer: C

Explanation: The ADDS role is required before promotion.

17. Which protocol is used for authentication in AD environments?

- A) SMTP
- B) Kerberos
- C) SNMP
- D) ICMP

Answer: B

Explanation: Kerberos is used for secure authentication.

18. What is the purpose of a Member Server?

- A) Hosts AD database
- B) Replicates AD
- C) Hosts roles like File Server or Print Server
- D) Provides DHCP for AD

Answer: C

Explanation: Member Servers provide other roles in a domain.

19. What command joins a Windows client to a domain?

- A) join-domain
- B) netdom join
- C) adclient add
- D) dsadd domain

Answer: B

Explanation: netdom join is used to join domains from CLI.

20. Which group scope can be used across multiple domains?

- A) Domain Local
- B) Global
- C) Local
- D) Universal

Answer: D

Explanation: Universal groups span multiple domains in a forest.

21. What is the default OU for new domain-joined computers?

- A) /Computers
- B) /Domain Controllers
- C) /Default
- D) /Root

Answer: A

Explanation: New machines go to the "Computers" container.

22. What type of replication does AD use between DCs?

- A) Asynchronous one-way
- B) Peer-to-peer multi-master
- C) Star topology
- D) Master-slave

Answer: B

Explanation: All DCs replicate changes in a multi-master setup.

23. Which of the following best describes AGDLP?

- A) A DNS resolution method
- B) Account nesting best practice
- C) Group Policy format
- D) Backup strategy

Answer: B

Explanation: AGDLP defines how users and permissions should be structured.

24. How do clients locate DCs during login?

- A) Broadcast
- B) WINS
- C) DNS SRV records
- D) LMHOSTS file

Answer: C

Explanation: SRV records in DNS help clients locate DCs.

25. Which of the following is a valid PowerShell command to create a user?

- A) New-User
- B) Create-ADUser
- C) New-ADUser
- D) Add-User

Answer: C

Explanation: New-ADUser is used in PowerShell to create users.

26. Which of these is NOT a benefit of ADC?

- A) High availability
- B) Redundancy
- C) Extra FSMO roles
- D) Load balancing

Answer: C

Explanation: FSMO roles are assigned, not duplicated arbitrarily.

27. What must match when a client joins a domain?

- A) MAC address
- B) Hostname
- C) Time synchronization
- D) BIOS version

Answer: C

Explanation: Kerberos requires time sync for ticket validity.

28. How is authentication processed when multiple DCs exist?

- A) The first in alphabetical order is used
- B) Load balancing distributes requests
- C) Only one DC handles all requests
- D) Clients choose DCs manually

Answer: B

Explanation: Authentication requests are balanced among DCs.

29. What type of database is used by ADDS?

- A) MySQL
- B) SQLite
- C) NTDS

D) Postgres

Answer: C

Explanation: NTDS.dit is the proprietary AD database.

30. What is a benefit of OU (Organizational Unit)?

A) Controls replication

B) Improves DNS

C) Helps delegate admin rights and apply policies

D) Blocks users from login

Answer: C

Explanation: OUs are containers to manage delegation and GPOs.

☒ Hard (10 Questions)

31. What happens if the PDC Emulator FSMO role is offline for a long time?

A) Password changes may not replicate correctly

B) New domains can't be created

C) GPOs stop working

D) AD replication stops entirely

Answer: A

Explanation: The PDC Emulator processes password changes and time sync.

32. Why would an admin use a Read-Only Domain Controller (RODC)?

- A) To increase backup frequency
- B) For branch offices with low security
- C) To enable AD write access from all machines
- D) To restrict DNS replication

Answer: B

Explanation: RODCs are ideal for insecure environments with limited rights.

33. How are universal group memberships stored in a multi-domain forest?

- A) On Global Catalog servers
- B) In DNS
- C) In each DC's local DB
- D) In schema master

Answer: A

Explanation: Universal group membership is stored in GC for forest-wide access.

34. Which of the following would most likely break Kerberos authentication?

- A) Misconfigured DNS
- B) Extra RAM
- C) Static IPs
- D) Local firewall

Answer: A

Explanation: Kerberos depends on SRV records in DNS.

35. Why should an admin avoid placing users directly in the “Users” container?

- A) It disables login
- B) It causes group policy issues
- C) The container is not an OU and hard to manage
- D) It breaks DNS

Answer: C

Explanation: Containers don’t allow GPO application or delegation.

36. Which port must be open for LDAP communication with AD?

- A) 80
- B) 3389
- C) 389
- D) 443

Answer: C

Explanation: LDAP uses TCP/UDP 389.

37. How can Group Policy be applied to a specific set of users and computers?

- A) Assign local firewall rules
- B) Apply GPO to a Security Group and filter it
- C) Only use default domain policy
- D) Block inheritance

Answer: B

Explanation: Security filtering limits GPO scope.

38. What does the Infrastructure Master FSMO role do?

- A) Manage group policy replication
- B) Ensure cross-domain object references
- C) Apply updates
- D) Handle backup

Answer: B

Explanation: It updates references to objects in other domains.

39. What tool would you use to check AD replication status?

- A) Repadmin
- B) Netdom
- C) Nslookup
- D) Ntdsutil

Answer: A

Explanation: repadmin /replsummary shows AD replication status.

40. In a two-DC setup, if both fail, what happens to domain logins?

- A) Clients log in using cached credentials
- B) Login is not possible
- C) Redirect to backup DNS
- D) Automatically convert to local logins

Answer: A

Explanation: Windows caches credentials for fallback login.
