

☒ Easy (10 MCQs)

1.

What is the purpose of the Evidence Checkout Log?

- A) Keep a backup
- B) Track who accesses evidence
- C) List evidence types
- D) Store tools

Answer: B

2.

What should you do before examining a hard drive?

- A) Defragment it
- B) Connect it directly
- C) Use a write blocker
- D) Format it

Answer: C

3.

Which of the following ensures authenticity of digital evidence?

- A) Time zone
- B) Hash value

C) File extension

D) RAM

Answer: B

4.

The first action during first response is to:

A) Reboot the system

B) Destroy files

C) Secure the scene

D) Install new software

Answer: C

5.

Forensic duplication refers to:

A) Copying the report

B) Bit-by-bit disk image

C) Taking photos

D) Recording audio

Answer: B

6.

Chain of custody can be broken by:

- A) Using proper log
- B) Failing to document transfer
- C) Hashing files
- D) Sealing the drive

Answer: B

7.

Evidence should be handled with:

- A) Bare hands
- B) Tweezers
- C) Precaution and documentation
- D) Network connection

Answer: C

8.

One of the goals of investigation is to:

- A) Change evidence
- B) Hide logs
- C) Establish a timeline
- D) Format drive

Answer: C

9.

First response personnel must avoid:

- A) Powering off live systems
- B) Recording timestamps
- C) Taking photos
- D) Labeling hardware

Answer: A

10.

Detecting incidents can be done using:

- A) Notepad
- B) IDS tools
- C) Antivirus
- D) Word processors

Answer: B

☒ Medium (20 MCQs)

11.

What is a key characteristic of a forensic image?

- A) It changes system files
- B) It's readable like Word files
- C) It's a sector-by-sector copy
- D) It deletes original evidence

Answer: C

12.

Which tool is used for disk imaging?

- A) MS Paint
- B) Wireshark
- C) FTK Imager
- D) Zoom

Answer: C

13.

Who typically fills out the evidence checkout log?

- A) Evidence handler
- B) Lawyer

- C) Hacker
 - D) Witness
- Answer: A**
-

14.

During an investigation, which must be verified repeatedly?

- A) Usernames
- B) Hash values
- C) Backup logs
- D) Disk labels

Answer: B

15.

Formulating response strategy involves:

- A) Reacting without plan
- B) Ignoring systems
- C) Planning containment
- D) Deleting logs

Answer: C

16.

A common mistake in forensics is:

- A) Using FTK
- B) Documenting events
- C) Skipping chain of custody
- D) Imaging disk

Answer: C

17.

What can invalidate evidence in court?

- A) Secure hashing
- B) Proper handling
- C) Broken chain of custody
- D) Sealed drive

Answer: C

18.

Evidence authentication proves:

- A) It's readable
- B) It's valid and unchanged
- C) It's encrypted
- D) It's visible on screen

Answer: B

19.

First response should include:

- A) Shutting everything down
- B) Alerting authorities
- C) Removing memory
- D) Changing BIOS

Answer: B

20.

Which tool is used to detect incidents?

- A) SIEM
- B) Media Player
- C) FTP Server
- D) Disk cleanup

Answer: A

21.

Write blockers are used during:

- A) Documentation
- B) Imaging
- C) Investigation report writing
- D) Presentation

Answer: B

22.

Response execution includes:

- A) Notifying users only
- B) Destroying logs
- C) Isolating affected systems
- D) Updating antivirus

Answer: C

23.

Common investigation activities exclude:

- A) Hash verification
- B) Timeline analysis
- C) System destruction
- D) File recovery

Answer: C

24.

One goal of investigation is to:

- A) Clean the hard drive
- B) Locate data leak source
- C) Sell systems
- D) Wipe all logs

Answer: B

25.

Which of the following can detect unusual network traffic?

- A) IDS
- B) Wordpad
- C) Device Manager
- D) Excel

Answer: A

26.

Evidence should be stored:

- A) In original system
- B) On shared network

- C) In secure storage
- D) On social media

Answer: C

27.

Hash mismatch indicates:

- A) Original evidence
- B) No changes
- C) Possible tampering
- D) Time sync

Answer: C

28.

Evidence that is not documented properly may be:

- A) Disregarded in court
- B) Considered more valid
- C) Enhanced
- D) More readable

Answer: A

29.

Bit-stream imaging excludes:

- A) Deleted data
- B) Empty sectors
- C) File allocation table
- D) None

Answer: D

30.

What happens if evidence is modified during analysis?

- A) It's more useful
- B) Integrity is preserved
- C) It's corrupted and inadmissible
- D) Court accepts it easily

Answer: C

☒ Hard (10 MCQs)

31.

What is a forensic sound method of copying data?

- A) Copy-paste

- B) FTP transfer
- C) Bit-by-bit imaging
- D) Drag and drop

Answer: C

32.

Best time to acquire memory is:

- A) After shutdown
- B) Before login
- C) When system is live
- D) After deleting files

Answer: C

33.

Which layer of response strategy includes stakeholder communication?

- A) Containment
- B) Formulation
- C) Planning
- D) Execution

Answer: D

34.

One tool for incident log analysis:

- A) GIMP
- B) Kibana
- C) PowerPoint
- D) Steam

Answer: B

35.

Which format is used in FTK Imager?

- A) .DOCX
- B) .E01
- C) .EXE
- D) .PDF

Answer: B

36.

A forensic examiner must avoid which action?

- A) Using hashes
- B) Documenting steps
- C) Editing original files
- D) Imaging data

Answer: C

37.

Authenticity of evidence is tested through:

- A) File names
- B) Write permissions
- C) Hash comparison
- D) Rebooting

Answer: C

38.

Forensic duplication ensures:

- A) Data is lost
- B) Exact copy for analysis
- C) Data gets corrupted
- D) Chain of custody breaks

Answer: B

39.

What happens if evidence is accessed without logging?

- A) More trust
- B) Better reports
- C) Break in chain of custody
- D) Nothing

Answer: C

40.

First responders must be trained to:

- A) Erase logs
- B) Ignore alerts
- C) Document and preserve evidence
- D) Test new apps

Answer: C
