

1.

What is the primary purpose of a Standard Operating Procedure in digital forensics?

- A) To increase complexity
- B) To ensure consistency and legal validity
- C) To make reports look bigger
- D) To speed up software execution

☒ **Answer: B**

Explanation: SOPs ensure evidence handling is consistent, repeatable, and legally admissible.

2.

Which operating system uses the registry for system settings?

- A) DOS
- B) Linux
- C) Windows
- D) MacOS

☒ **Answer: C**

3.

What is the first step upon arriving at a digital crime scene?

- A) Delete temporary files
- B) Photograph and document the scene
- C) Format the system
- D) Run antivirus

☒ Answer: B

4.

A DOS system typically uses which file system?

- A) NTFS
- B) EXT4
- C) FAT16
- D) exFAT

☒ Answer: C

5.

Which tool is used for memory capture in Windows systems?

- A) HxD
- B) RAMMap
- C) FTK Imager Lite
- D) Event Viewer

☒ Answer: C

6.

Which key area is specific to Windows but not DOS?

- A) File explorer
- B) Command line
- C) Registry hives
- D) Batch scripts

☒ **Answer: C**

7.

Should you unplug a system before capturing memory?

- A) Yes
- B) No

☒ **Answer: B**

Explanation: Capturing RAM must happen while the system is still running.

8.

Which of the following is NOT a registry hive in Windows?

- A) SYSTEM
- B) SAM
- C) USERS
- D) LOGS

☒ **Answer: D**

9.

Which of the following is a volatile source of evidence?

- A) RAM
- B) HDD
- C) SSD
- D) CD-ROM

☒ **Answer: A**

10.

Which file in Windows shows user-specific settings?

- A) boot.ini
- B) SYSTEM32
- C) NTUSER.DAT
- D) autoexec.bat

☒ **Answer: C**

☒ **20 Medium MCQs**

11.

What is the correct order of forensic procedure?

- A) Investigation ☒ Preservation ☒ Documentation ☒ Reporting
- B) Preservation ☒ Investigation ☒ Documentation ☒ Reporting
- C) Documentation ☒ Preservation ☒ Reporting ☒ Analysis
- D) Reporting ☒ Preservation ☒ Investigation ☒ Documentation

☒ **Answer: B**

12.

Which component is most critical to maintain during the entire forensic process?

- A) Power source
- B) Chain of custody
- C) IP address
- D) Network connection

☒ **Answer: B**

13.

What does 'write-blocking' ensure?

- A) Read speed is increased
- B) No accidental writes occur to evidence
- C) Faster backup
- D) Logging is enabled

☒ **Answer: B**

14.

Which of the following is NOT a common Windows artifact?

- A) Prefetch files
- B) Event logs
- C) Registry
- D) .nasm files

☒ **Answer: D**

15.

Which folder in Windows contains cached executables for faster startup?

- A) AppData
- B) System32
- C) Prefetch
- D) Temp

☒ **Answer: C**

16.

A proper forensic report should include:

- A) Analyst opinions only

- B) All system passwords
- C) Step-by-step actions and findings
- D) Marketing analysis

☒ **Answer: C**

17.

Which file provides boot configuration on older Windows systems?

- A) config.sys
- B) boot.ini
- C) winload.exe
- D) bcdedit

☒ **Answer: B**

18.

If a system is encrypted with BitLocker and is powered off, what happens?

- A) The data becomes permanently corrupted
- B) The encryption key is lost
- C) Memory is saved
- D) Evidence is lost without the decryption key

☒ **Answer: D**

19.

Which command in Windows lists all running processes?

- A) netstat
- B) tasklist
- C) services.msc
- D) msconfig

☒ **Answer: B**

20.

What is a drawback of using normal OS shutdown during incident response?

- A) It saves logs
- B) It clears RAM
- C) It documents the issue
- D) It collects registry files

☒ **Answer: B**

21.

In DOS, TSR stands for:

- A) Temporary Software Resource
- B) Terminate and Stay Resident
- C) Terminal Software Runtime
- D) Temporary System Run

☒ Answer: B

22.

Which is NOT part of the chain of custody document?

- A) Evidence description
- B) Analyst's personal opinion
- C) Date and time of transfer
- D) Handler's signature

☒ Answer: B

23.

Which tool allows sector-level imaging of drives?

- A) WinRAR
- B) FTK Imager
- C) Snipping Tool
- D) Notepad++

☒ Answer: B

24.

Which tool would be most appropriate to analyze Windows Event Logs?

- A) Autopsy
- B) Volatility
- C) Event Viewer
- D) Regedit

☒ **Answer: C**

25.

To analyze a DOS system, which of the following should be avoided?

- A) Connecting it to the internet
- B) Making a disk image
- C) Powering down after analysis
- D) Using command-line tools

☒ **Answer: A**

26.

Which folder in Windows contains most registry files?

- A) C:\Program Files
- B) C:\Windows\System32\Config
- C) C:\Users\Admin\Registry
- D) C:\ProgramData

☒ **Answer: B**

27.

Which DOS file executes at system boot?

- A) win.ini
- B) start.bat
- C) config.sys
- D) bootcfg

☒ **Answer: C**

28.

Why is RAM analysis important in forensics?

- A) It stores browser history
- B) It contains volatile data like passwords
- C) It has registry keys
- D) It holds log files permanently

☒ **Answer: B**

29.

What is the output of ipconfig command in Windows?

- A) DNS queries
- B) Firewall rules

C) IP address configuration

D) Process tree

☒ **Answer: C**

30.

What command lists network connections on a Windows machine?

A) dir

B) tasklist

C) netstat

D) ping

☒ **Answer: C**

☒ 10 Hard MCQs

31.

Which forensic method is ideal when analyzing a DOS file system?

A) NTFS parsing

B) Registry analysis

C) FAT16 sector-level imaging

D) Group policy examination

☒ Answer: C

32.

Which Windows registry hive stores user login details and password hashes?

- A) NTUSER.DAT
- B) SAM
- C) SOFTWARE
- D) SYSTEM

☒ Answer: B

33.

Which log type would help in identifying failed login attempts?

- A) Prefetch
- B) Setup logs
- C) Security event logs
- D) System restore logs

☒ Answer: C

34.

What would most likely contain evidence of a recently executed program?

- A) BIOS
- B) RAM only
- C) Prefetch folder
- D) Recycle Bin

☒ **Answer: C**

35.

Which command can be used in CMD to save registry keys to a file?

- A) reg export
- B) regedit /dump
- C) dumpreg
- D) export hive

☒ **Answer: A**

36.

Which file system supports journaling and permissions, making it useful for modern forensic audit trails?

- A) FAT16
- B) NTFS
- C) exFAT
- D) FAT32

☒ **Answer: B**

37.

What tool would you use to perform volatile memory analysis on a dump file?

- A) FTK Imager
- B) Autopsy
- C) Volatility Framework
- D) EnCase Viewer

☒ **Answer: C**

38.

Why is unplugging the power a last resort in forensic acquisition?

- A) It resets BIOS
- B) It clears logs
- C) It destroys live evidence in RAM
- D) It causes hard drive failure

☒ **Answer: C**

39.

Which type of evidence is most at risk if live capture is skipped?

- A) HDD data
- B) Timestamps

C) Temporary files

D) RAM contents

☒ **Answer: D**

40.

In a court of law, which of the following would weaken a forensic report the most?

A) Using open-source tools

B) Hash mismatch of acquired image

C) Long investigation time

D) Report written in Word format

☒ **Answer: B**
