

☒ Easy Level (10 Questions)

Q1. What does SIEM stand for?

- A) Security Internal Event Management
- B) System Incident Event Management
- C) Security Information and Event Management
- D) System Intrusion Event Monitor

Answer: C

Q2. Which protocol is commonly used for log forwarding?

- A) SMTP
- B) DNS
- C) Syslog
- D) FTP

Answer: C

Q3. Which tool is part of the ELK Stack for visualizing logs?

- A) Logstash
- B) Elasticsearch
- C) Kibana
- D) Fluentd

Answer: C

Q4. What is the primary function of a log file?

- A) Send emails
- B) Store system events
- C) Block IP addresses
- D) Scan files

Answer: B

Q5. Which of the following is a **SIEM** solution?

- A) FileZilla
- B) OpenVAS
- C) Splunk
- D) Nmap

Answer: C

Q6. Which log type stores information about **unauthorized login attempts**?

- A) Application log
- B) Security log
- C) Web server log
- D) Debug log

Answer: B

Q7. What triggers an **alert** in SIEM?

- A) Dashboard refresh
- B) Log retention
- C) Correlation rule match
- D) Email backup

Answer: C

Q8. Which of the following is used to **send** logs to SIEM from Linux?

- A) Crontab
- B) Logger command
- C) SSH
- D) Whois

Answer: B

Q9. What is the role of **Logstash** in the ELK Stack?

- A) Stores logs
- B) Visualizes logs
- C) Ingests and processes logs
- D) Monitors CPU usage

Answer: C

Q10. What port is **Syslog UDP** usually configured on?

- A) 21
- B) 25
- C) 514
- D) 80

Answer: C

☒ Medium Level (20 Questions)

Q11. Which log format is commonly used by enterprise-grade SIEMs like ArcSight?

- A) JSON
- B) LEEF
- C) XML
- D) CSV

Answer: B

Q12. What is **event correlation** in SIEM?

- A) Combining logs into PDFs
- B) Sorting logs alphabetically
- C) Connecting related security events

D) Encrypting logs

Answer: C

Q13. Which SIEM component **normalizes** logs before analysis?

A) Visualizer

B) Log agent

C) Parser

D) Indexer

Answer: C

Q14. In log analysis, a sudden increase in login failures could indicate:

A) Patch installation

B) Brute-force attack

C) System upgrade

D) Log rotation

Answer: B

Q15. Which type of log would you check for **HTTP GET and POST** requests?

A) System log

B) DNS log

C) Web server log

D) Firewall log

Answer: C

Q16. Which log analyzer is commonly used with SIEM to **ship logs** from endpoints?

- A) Kibana
- B) Filebeat
- C) Grafana
- D) UFW

Answer: B

Q17. Which field is typically included in a **Syslog** message?

- A) Time, source IP, message body
- B) MAC address only
- C) Domain and port only
- D) DNS query type

Answer: A

Q18. What is the **main benefit** of centralized log analysis in SIEM?

- A) Lowers disk space
- B) Speeds up login time
- C) Enables holistic threat visibility
- D) Reduces CPU temperature

Answer: C

Q19. A SIEM receives the following logs:

- Login failed
- Account locked
- Admin login from new IP
This could be correlated as:
A) Normal admin activity
B) Possible brute-force followed by credential theft
C) DNS misconfiguration
D) Log rotation issue
Answer: B

Q20. What does a **log shipper** do?

- A) Blocks logs
- B) Encrypts logs
- C) Forwards logs to a central SIEM

D) Replaces log data

Answer: C

Q21. The event triggering mechanism in SIEM relies on:

A) Firewall ACLs

B) Cron jobs

C) Matching defined rule sets

D) Web proxies

Answer: C

Q22. Which open-source SIEM tool is based on ELK and adds security modules?

A) Snort

B) Wazuh

C) Nessus

D) Suricata

Answer: B

Q23. Which SIEM feature supports **compliance auditing** (e.g., PCI-DSS)?

A) Alert filtering

B) Threat intelligence feeds

C) Prebuilt audit dashboards and reports

D) IP geolocation

Answer: C

Q24. When logs are too verbose and irrelevant, what SIEM feature helps?

- A) Data encryption
- B) Log correlation
- C) Filtering/Parsing
- D) Packet sniffing

Answer: C

Q25. Which part of a SIEM helps visualize data trends and security metrics?

- A) Log agent
- B) Alert rule
- C) Dashboard
- D) Syslog server

Answer: C

Q26. You want to **receive alerts** in case of suspicious user logins at night. What do you configure?

- A) DNS record
- B) IP whitelist
- C) Correlation rule
- D) DHCP scope

Answer: C

Q27. In ELK, which component stores the processed logs?

- A) Filebeat
- B) Logstash
- C) Elasticsearch
- D) Kibana

Answer: C

Q28. What is a **use case** in SIEM?

- A) Backup configuration
- B) Defined threat scenario for detection
- C) DNS spoofing
- D) SIEM memory size

Answer: B

Q29. Which port is often used by **Syslog over TCP**?

- A) 25
- B) 443
- C) 514
- D) 515

Answer: C

Q30. A **correlation rule** triggers an alert when:

- A) Logs are deleted
- B) Multiple conditions are met within a time window
- C) User logs in correctly
- D) Filebeat fails

Answer: B

☒ Hard Level (10 Questions)

Q31. What is the role of **CEF (Common Event Format)** in SIEM?

- A) Compress logs
- B) Encrypt logs
- C) Standardize event logs from diverse sources
- D) Visualize logs

Answer: C

Q32. What happens if log forwarding is misconfigured?

- A) Alerts increase
- B) Events may never reach SIEM
- C) Logs become more detailed

D) File system fills with spam

Answer: B

Q33. What SIEM feature is essential for detecting **multi-stage attacks**?

A) NAT traversal

B) Event correlation

C) Firewall ACLs

D) Disk defragmentation

Answer: B

Q34. Which of the following helps identify **unknown threats** in logs using behavioral patterns?

A) Signature-based IDS

B) Regex filters

C) Anomaly detection engine

D) Static log archiving

Answer: C

Q35. Which issue may arise due to **lack of log normalization**?

A) Increased CPU temperature

B) Correlation rule failure due to inconsistent fields

C) Port blocking

D) Slow internet speed

Answer: B

Q36. Why are **time synchronization** and accurate timestamps critical in SIEM?

- A) To encrypt logs properly
- B) To sort IP addresses
- C) To correlate events accurately across systems
- D) To generate dashboards faster

Answer: C

Q37. A false positive in SIEM alerting means:

- A) A real attack occurred
- B) A true alert was missed
- C) A benign event was flagged as malicious
- D) A sensor failed

Answer: C

Q38. What is a **playbook** in SIEM or SOAR systems?

- A) Step-by-step response plan to specific alerts
- B) PDF of security policies
- C) Syslog server setup
- D) Regex parser for firewall logs

Answer: A

Q39. What is a potential risk of **log overload** in SIEM systems?

- A) Longer cable connections
- B) Delayed or missed alerting
- C) Port forwarding failure
- D) IP conflicts

Answer: B

Q40. What makes **log correlation rules** complex in large environments?

- A) Static rule formats
- B) Differences in log formats and sources
- C) Too few agents
- D) Limited RAM

Answer: B
