

☒ EASY (10 Questions)

Q1. What does exploit analysis focus on?

- A. Code styling
- B. Vulnerability scanning
- C. Understanding how vulnerabilities are exploited
- D. Designing GUIs

Answer: C

Q2. Which tool is used to deliver payloads automatically?

- A. Notepad
- B. Metasploit
- C. Excel
- D. Paint

Answer: B

Q3. What is a breakpoint in debugging?

- A. A virus
- B. A loop terminator
- C. A pause in code execution
- D. File end

Answer: C

Q4. Which Python module is used for debugging?

- A. debug
- B. trace
- C. pdb
- D. pyd

Answer: C

Q5. What is the result of $10 / 0$ in Python?

- A. 0
- B. Exception
- C. 10
- D. Nothing

Answer: B

Q6. What does p do in PDB?

- A. Prints variable value
- B. Pauses loop
- C. Loads library
- D. Performs loop

Answer: A

Q7. Which tool supports writing custom exploit scripts?

- A. Wireshark
- B. pwntools
- C. MS Paint
- D. Vim

Answer: B

Q8. Debugging is useful for:

- A. Making music
- B. Playing games
- C. Finding software errors
- D. Writing essays

Answer: C

Q9. Which debugging tool is CLI-based and used on Linux?

- A. OllyDbg
- B. GDB
- C. Excel
- D. DevTools

Answer: B

Q10. What does fuzzing do?

- A. Encrypt data
- B. Randomize inputs to find crashes
- C. Format the code
- D. Compress files

Answer: B

☒ MEDIUM (20 Questions)

Q11. Which command sets a breakpoint in GDB?

- A. set b
- B. stop
- C. break
- D. exit

Answer: C

Q12. What does pwntools provide?

- A. File encryption
- B. Shellcode execution & automation
- C. Image compression
- D. Memory cleanup

Answer: B

Q13. What command steps into a function in PDB?

- A. s
- B. n
- C. l
- D. r

Answer: A

Q14. What's the primary use of automation in exploit analysis?

- A. Saving logs
- B. Detecting duplicates
- C. Repeating exploit attempts efficiently
- D. Formatting text

Answer: C

Q15. What does GDB attach mode do?

- A. Detaches device
- B. Kills process
- C. Attaches debugger to running process
- D. Sends emails

Answer: C

Q16. What language is pwntools written in?

- A. C
- B. Python
- C. Go
- D. Bash

Answer: B

Q17. What does the command continue do in GDB?

- A. Stops execution
- B. Restarts the app
- C. Resumes execution
- D. Loops again

Answer: C

Q18. Which of these is NOT a debugger?

- A. x64dbg
- B. PDB
- C. Boofuzz
- D. GDB

Answer: C

Q19. A watchpoint in debugging monitors:

- A. Memory changes
- B. UI actions
- C. Breakpoint locations
- D. Log size

Answer: A

Q20. Which of these helps analyze binary executables?

- A. pwntools
- B. OllyDbg
- C. Chrome
- D. Python IDLE

Answer: B

Q21. What is the output of `pdb.set_trace()`?

- A. Compiles code
- B. Launches debugger at that point
- C. Exits Python
- D. Sleeps the process

Answer: B

Q22. Which library helps in automating buffer overflow payloads?

- A. hashlib
- B. pwntools
- C. turtle
- D. os

Answer: B

Q23. Which tool supports scripting in exploit development?

- A. Wireshark
- B. Metasploit
- C. Paint
- D. Terminal

Answer: B

Q24. Which is used for reverse engineering and analysis?

- A. GDB
- B. Ghidra
- C. IDA Pro
- D. All of the above

Answer: D

Q25. What is a core dump?

- A. Backup
- B. Log file
- C. Snapshot of process memory at crash
- D. Shell

Answer: C

Q26. What Python keyword throws an exception?

- A. if
- B. throw
- C. raise
- D. except

Answer: C

Q27. What does n command in pdb do?

- A. Next line
- B. Restart
- C. Exit debugger
- D. Evaluate

Answer: A

Q28. Fuzzing automation is used in:

- A. File sorting
- B. Finding crashes
- C. UI testing
- D. DNS lookup

Answer: B

Q29. set follow-fork-mode in GDB is for:

- A. Tracing parent or child process
- B. Switching terminals
- C. Killing debugger
- D. Output formatting

Answer: A

Q30. GDB command to view registers?

- A. regs
- B. show all
- C. info registers
- D. r -v

Answer: C

☒ **HARD (10 Questions)**

Q31. Which debugger is most suited for analyzing stack canaries?

- A. PDB
- B. OllyDbg
- C. GDB
- D. Sublime

Answer: C

Q32. How does pwntools.ELF() help in exploitation?

- A. Creates shellcode
- B. Parses ELF binaries for symbols
- C. Encrypts code
- D. Sends payload

Answer: B

Q33. What command in GDB shows memory at address?

- A. x
- B. m
- C. trace
- D. memview

Answer: A

Q34. What does `buffer = b"A"*64 + b"\x90\x90..."` represent?

- A. Dictionary
- B. Exploit payload
- C. Config
- D. None

Answer: B

Q35. What is Segmentation Fault typically caused by?

- A. Bad syntax
- B. Memory corruption
- C. File not found
- D. Infinite loop

Answer: B

Q36. How can one track return addresses in a crash?

- A. Logs
- B. Stack backtrace
- C. CPU usage
- D. temp files

Answer: B

Q37. Which plugin architecture is best for exploit toolkits?

- A. Monolithic
- B. Microkernel
- C. Cloud-based
- D. Real-time

Answer: B

Q38. How does dynamic analysis differ from static?

- A. Dynamic runs the code
- B. Dynamic analyzes syntax only
- C. Static allows runtime logs
- D. Static uses shell

Answer: A

Q39. What is a gadget in ROP?

- A. Exploit payload
- B. Small piece of useful code ending in ret
- C. Antivirus rule
- D. None

Answer: B

Q40. Which command in GDB sets conditional breakpoint?

- A. cond
- B. if-break
- C. break if
- D. set break

Answer: A
