

Certainly! Here's a comprehensive set of **40 MCQs** on **Service Operation** (Session 4), with **10 easy**, **20 medium**, and **10 hard** questions—each with four options, the correct answer, and an explanation supported by citations.

☒ Easy (10 MCQs)

1.

****What is the primary goal of Service Operation?****

- A) To design new services
- B) To manage day-to-day IT service delivery at agreed levels
- C) To develop service strategy
- D) To retire obsolete services

Answer: B

Explanation: Service Operation focuses on ensuring services are delivered effectively and efficiently to users (wiki.en.it-processmaps.com, fynd.academy, blog.invgate.com, vivantio.com).

2.

****Which function serves as the single point of contact for users?****

- A) IT Application Management
- B) IT Technical Management
- C) Service Desk
- D) IT Operations Management

Answer: C

Explanation: The Service Desk is the face of IT and handles incidents and requests (fynd.academy, blog.invgate.com).

3.

****Which process is responsible for restoring service as quickly as possible?****

- A) Problem Management
- B) Incident Management
- C) Event Management
- D) Access Management

Answer: B

Explanation: Incident Management aims to restore service rapidly and minimize impact (blog.invgate.com, en.wikipedia.org).

4.

****Which process detects and categorizes changes in state?****

- A) Incident Management
- B) Event Management
- C) Access Management
- D) Problem Management

Answer: B

Explanation: Event Management monitors events and filters those needing action (wiki.en.it-processmaps.com, blog.invgate.com).

5.

****Problem Management is primarily focused on:****

- A) Fixing incidents fast
- B) Managing infrastructure
- C) Identifying and resolving root causes
- D) Authorizing access

Answer: C

Explanation: Problem Management seeks root-cause  (blog.invgate.com, lucidchart.com, ivanti.com).

6.

****Which process handles requests like password resets?****

- A) Incident Management
- B) Request Fulfillment
- C) Event Management

D) Access Management

Answer: B

Explanation: Request Fulfillment manages routine user requests (blog.invgate.com).

7.

****Event management can help prevent incidents by:****

A) Automatically deploying patches

B) Alerting before failures via warnings

C) Restoring service

D) Granting access

Answer: B

Explanation: Event warnings allow proactive intervention (en.wikipedia.org, en.wikipedia.org, cataligent.in).

8.

****Technical Management function focuses on:****

A) End-user communication

B) Infrastructure expertise and support

C) Supplier contracts

D) Service planning

Answer: B

Explanation: Technical Management specializes in infrastructure (manageengine.com, blog.invgate.com, simpliaxis.com, fynd.academy).

9.

****Which process ensures only authorized users access services?****

A) Change Management

B) Access Management

C) Problem Management

D) Asset Management

Answer: B

Explanation: Access Management enforces security policies (alloysoftware.com, blog.invgate.com).

10.

****Which function oversees ongoing operational activities like events and automation?****

- A) Application Management
- B) Service Desk
- C) IT Operations Management
- D) Change Management

Answer: C

Explanation: IT Operations Management manages day-to-day infrastructure operations (blog.invgate.com, ivanti.com, manageengine.com).

☒ Medium (20 MCQs)

11.

****Balancing reliability vs. cost in Service Operation is an example of:****

- A) Strategic Planning
- B) Operational Trade-Off
- C) Problem Management
- D) Access Management

Answer: B

Explanation: Operational teams must trade-off cost and reliability in design and delivery.

12.

Which term describes an automated monitoring notification?

- A) Incident
- B) Exception Event
- C) Problem

D) Change

Answer: B

Explanation: Exception events indicate conditions requiring action (wiki.en.it-processmaps.com, blog.invgate.com, simpliaxis.com).

13.

****What triggers a problem ticket during a major incident?****

- A) Restoration of services
- B) Detection of root causes
- C) Authorization of access
- D) Request fulfillment

Answer: B

Explanation: Problem tickets are raised to investigate major incidents (manageengine.com, en.wikipedia.org, wiki.en.it-processmaps.com).

14.

****Which role coordinates day-to-day operations across the Service Operation lifecycle?****

- A) Change Manager
- B) Incident Manager
- C) IT Operations Manager
- D) Problem Manager

Answer: C

Explanation: IT Operations Manager oversees operational activities (wiki.en.it-processmaps.com, manageengine.com).

15.

****Which function supports application lifecycle and health?****

- A) Service Desk
- B) Technical Management
- C) Application Management
- D) Event Management

Answer: C

Explanation: Application Management specializes in managing software applications (fynd.academy, blog.invgate.com, inoc.com).

16.

****Which metric is crucial for major incident management?****

- A) MTTR (Mean Time to Repair)
- B) MTTR (Mean Time to Respond)
- C) SLA Breach Rate
- D) Service Utilization

Answer: A

Explanation: MTTR measures how quickly incidents are resolved (manageengine.com, alloysoftware.com).

17.

****Which process is proactive rather than reactive?****

- A) Incident Management
- B) Event Monitoring
- C) Problem Management
- D) Request Fulfillment

Answer: C

Explanation: Proactive Problem Management prevents issues before they occur (ivanti.com, wiki.en.it-processmaps.com).

18.

****Which process interacts with Change Management to implement fixes?****

- A) Event Management
- B) Incident Management
- C) Problem Management
- D) Access Management

Answer: C

Explanation: Known errors trigger changes for resolution (ivanti.com, blog.invgate.com).

19.

****Which tool is central to maintaining CI (Configuration Item) data?****

- A) Knowledge Base
- B) CMDB
- C) Event Dashboard
- D) SLA Tracker

Answer: B

Explanation: CMDB maintains CI information for Operation processes.

20.

What defines service availability and impact in incidents?

- A) SLA
- B) Event Thresholds
- C) KEDB
- D) CMDB

Answer: A

Explanation: SLAs guide incident priorities and impact classifications.

21.

Who manages escalation during a major incident?

- A) Service Desk Analyst
- B) Major Incident Manager
- C) Problem Manager
- D) Technical Lead

Answer: B

Explanation: Major Incident Manager coordinates teams and decisions (en.wikipedia.org, manageengine.com).

22.

****Which practice filters and prioritizes events?****

- A) Problem Management
- B) Change Management
- C) Event Management

D) Access Management

Answer: C

Explanation: Event Management filters events by significance (ivanti.com, en.wikipedia.org).

23.

****Which role resolves recurring incidents in the Known Error Database?****

A) Incident Manager

B) Problem Manager

C) Change Manager

D) Service Desk Manager

Answer: B

Explanation: Problem Manager updates KEDB and ensures resolution plans (ivanti.com).

24.

****Which function responds to application errors and bugs?****

A) Service Desk

B) Application Management

C) Technical Management

D) Event Management

Answer: B

Explanation: Application Management handles software-tier issues.

25.

Which statement is true about Incident vs Problem Management?

A) Incident resolves rapidly; Problem aims for root resolution

B) They are the same processes

C) Incident is proactive

D) Problem only logs automation errors

Answer: A

Explanation: Incident is immediate response; Problem focuses on root causes (manageengine.com, blog.invgate.com).

26.

****What is the service desk's role in a problem?****

- A) Create and escalate
- B) Authorize changes
- C) Solve root cause
- D) Deploy changes

Answer: A

Explanation: Service Desk logs incidents, escalates to Problem Management (en.wikipedia.org, blog.invgate.com).

27.

****Technical Management escalates to Problem Management when:****

- A) Event logs are full
- B) Root cause unknown
- C) User requests escalate
- D) Access fails

Answer: B

Explanation: If technical expertise can't fix an issue permanently, escalate for RCA.

28.

What does KEDB stand for?

- A) Known Emergency Dispatch Board
- B) Known Error Database
- C) Key Event Decision Base
- D) Knowledge Execution Data Bank

Answer: B

Explanation: KEDB stores known errors and workarounds (lucidchart.com).

29.

****Which function handles routine automation tasks in operations?****

- A) Service Desk
- B) IT Operations Management
- C) Problem Management
- D) Access Management

Answer: B

Explanation: IT Operations Management manages automation and routine events (blog.invgate.com).

30.

****Balancing cost vs. reliability mostly occurs during:****

- A) Strategy Planning
- B) Service Operation delivery & continual improvement cycles
- C) Transition Deployment
- D) Catalog Design

Answer: B

Explanation: Operation teams must balance service costs and SLA reliability continually.

☒ Hard (10 MCQs)

31.

****Which category of event indicates imminent failure?****

- A) INFO
- B) WARN
- C) EXCEPTION
- D) DEBUG

Answer: B

Explanation: WARN alerts signal thresholds nearing breach (simplilearn.com, en.wikipedia.org, alloysoftware.com).

32.

****A PSG (Problem-Solving Group) was part of ITIL 2007 but removed in 2011.****

- A) True
- B) False
- C) Only in ITIL 4
- D) PSG is an official role

Answer: A

Explanation: PSG concept was discontinued after ITIL 2007 (en.wikipedia.org, invensislearning.com).

33.

****During a major incident, the major incident manager does NOT typically:****

- A) Declare the incident
- B) Act as communication lead
- C) Develop the SLAs
- D) Assemble MIT

Answer: C

Explanation: SLAs defined in Strategy/Design, not by the incident manager (manageengine.com).

34.

****Which of these roles is accountable for daily operational performance?****

- A) Problem Manager
- B) IT Operations Manager
- C) Service Desk Analyst
- D) Change Manager

Answer: B

Explanation: IT Operations Manager ensures operational performance (blog.invgate.com, wiki.en.it-processmaps.com, manageengine.com).

35.

****Following a major incident resolution, who leads RMS (Review/maintenance)?****

- A) Incident Manager
- B) Problem Manager
- C) Change Manager
- D) Technical Manager

Answer: B

Explanation: Problem Manager oversees RCA and post-incident review ([ivanti.com](https://www.ivanti.com), fynd.academy).

36.

****Which behavior exemplifies balancing reliability and cost in operations?****

- A) Automatically escalates all events
- B) Ignores WARN events for low-impact devices
- C) Always resolves EXCEPTIONs
- D) Avoids creating problem tickets

Answer: B

Explanation: Avoid unnecessary fixes on non-critical assets to save cost.

37.

Which process completes the loop between Event and Problem Management?

- A) Incident
- B) Change
- C) Configuration
- D) Access

Answer: A

Explanation: Events -> incident -> problem -> change -> resolution.

38.

Access Management does NOT include:

- A) Granting access
- B) Revoking access
- C) Auditing access

D) Defining policy

Answer: D

Explanation: Policies defined upstream; Access Management enforces them (vivantio.com, blog.invgate.com, manageengine.com, cataligent.in).

39.

In Service Operation, who manages incident trend analysis?

A) Incident Manager

B) Service Desk Manager

C) Problem Manager

D) Technical Manager

Answer: C

Explanation: Problem Manager analyzes trends to prevent recurrence.

40.

Balancing conflicting goals often relies on:

A) Heuristic decisions

B) SLA, OLA, and cost metrics review

C) Ad hoc meetings

D) Emergency CAB

Answer: B

Explanation: Reviewing SLA performance, underlying agreements, and cost helps strategic balancing.

These MCQs cover the **core processes, functions, role responsibilities**, and **operational trade-offs** within ITIL's **Service Operation** stage. Let me know when you're ready to proceed to MCQs on Session 5: Continual Service Improvement!
